

Dial Type Air Gauge Unit

The new air saver can easily pay for itself in a short time. Measurement with air is still a very stable and accurate way to inspect parts. Instead of having the air supply on continuously, the air saver can control when and how long the air will remain on. It will automatically time out or shut off the air when the gauge is not being used. You can connect this instrument to your existing air gauge unit.

- ✓ Model 1A gives most economical solution to inspection needs
- ✓ High speed of response and self cleaning of gauging area ensures accurate reading of parameters
- ✓ High accuracy and linearity
- ✓ Non-contact gauging so, no or minimum frictional wear
- ✓ Requires Two setting masters for correct linear setting
- ✓ Minimum line pressure requires 4.5 bars
- ✓ Air consumption 50 LPM
- ✓ Air Saver unit can be attached
- ✓ Range: $\pm 0.040\text{mm}$
- ✓ Least Count: 0.001mm
